DETAILED ACTION

Allowable Subject Matter

1. Claims 2-21, 24-29, 32, 33 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 4, the prior art fails to disclose or make obvious an inspection probe for inspecting a surface finish of a machined surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the machined surface is a cylinder bore for an engine block, and in combination with the other recited limitations of claim 4. Claims 2, 3, 5-21 are allowed by the virtue of dependency on the allowed claim 4.

Regarding claim 26, the prior art fails to disclose or make obvious a method for inspecting the surface finish of a machined surface having the steps of determining a signature of the detected scattered laser beam light; and determining a condition of the machined surface from the signature, wherein the machined surface is a cylinder bore and, wherein determining a signature includes comparing a scattered light signature from a first-type finishing mark to a scattered light signature from a second-type finishing mark, and in combination with the other recited limitations of claim 26. Claims 24, 25 are allowed by the virtue of dependency on the allowed claim 26.

Regarding claim 27, the prior art fails to disclose or make obvious a reconfigurable inspection apparatus for inspecting the surface finish of a plurality of machined surfaces in a part

having a reconfigurable multi-spindle apparatus having a plurality of spindles; a plurality of inspection probes rotatably and movably supported on corresponding spindles and a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, and in combination with the other recited limitations of claim 27. Claims 28, 29 are allowed by the virtue of dependency on the allowed claim 27.

Regarding claim 32, the prior art fails to disclose or make obvious an inspection probe for inspecting the surface finished of a manufactured surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the first and second finishing marks correspond to finishing marks before and after a removal of material, and in combination with the other recited limitations of claim 32.

Regarding claim 33, the prior art fails to disclose or make obvious an inspection probe for inspecting the surface finished of a manufactured surface having a computer system including software that compares the detected scattered light to a scattered light signature from a first-type finishing mark and to a scattered light signature from a second-type finishing mark and determines a condition of the surface finish, wherein the first and second finishing marks correspond to finishing marks before and after an addition of material, and in combination with the other recited limitations of claim 33.
